

Red Ball Drills® have run live during some of the world's largest, best-loved Esports competitions and events. We've conducted multiple scenarios addressing the unique cultural differences within event & gaming communities, while building "one of a kind" live drills in shows and events.

"Since June 2016, we've run numerous Red Ball Drills which have helped our entire organization. We feel more confident today in our security presence, and that our overall event preparedness and safety is in much clearer focus."

- General Counsel, Major Gaming Co.

Red Ball Drills® are instrumental in allowing safety and security operations to start changing the conversation from "response" to "process" – with dramatic effect:

- Highlights actual scenarios, including ticketing disruption, score tampering, player doxxing & swatting, cheating
- Begins to address personal player risks before and after games and other aspects of competition safety
- Challenges the preparedness for coordinated "Cy-Phy" (Cyber breach + Physical actions) attacks emerging
- Educates staff and management on the different stakes and challenges in this industry along with best practices

Our Safety, Communication, Control model differs from "Run, Hide, Fight" exercises in very fundamental ways.

Other programs claim to be 'customized' for each client, but instead they focus on their own methodology. Red Ball Drills® are a truly different exercise – a location and site-specific preparation drill – fully scenario-driven by you!

In the actual running of any Red Ball Drills® there are never any simulated firearms, weapons, fakes, or trauma-inducing events. The revolutionary approach we bring is all about intelligent layers of learning and serious discussion among the participants and the stakeholders. **Call or visit us online to find out more.**
